

Commodore A4091

Rev B Advanced SCSI II Controller Board

This Zorro III board was originally designed and sold by Commodore, which did a single run of the Rev A design before shelving it. Commodore was running out of money at the time and didn't want to risk a second production run. The Rev B design was given to DKB Software for production, marketing, sales, distribution, and support.

Features:

- Boot ROM
- NCR 53C710 SCSI II controller
- 50 pin internal connector
- 50 pin external SCSI2 connector
- 3.5" hard drive mounts on the card
- Active SCSI termination
- Zorro III bus support

Caveats:

- Requires Buster 11
- Does not work with with A3640 Rev 3.0
- No RAM option
- No wide SCSI support

The Commodore A4091 was reverse-engineered by Stefan Reinauer and Chris Hooper.
